

# NEWS THIS MONTH

**YOUR SOURCE FOR ALL THINGS ROCK-BREAKING**

## VISIT WITH US AT CIM CONNECT

CIM is Canada's leading technical industry resource for the minerals, metals, materials and petroleum sectors. Dedicated to advancing knowledge, facilitating innovation, celebrating excellence and promoting sustainable practices across the full spectrum of our industry. With over 10,000 members, 30 local and international branches, 11 societies and 11 committees, we are the premier source for industry professional development.

***We'll be at booth 3010***

We'll be highlighting our sensitive and unique explosive and drilling solutions to the mining industry during the expo.

Nxburst / Nonex - The premiere deflagrating rock-breaking cartridge that is going where conventional explosives can't. With

recent projects in congested urban environments like Manhattan and Norway, Nxburst is a tool every construction and mining company needs to have in its arsenal.

QuikDraw Mine Hang-Up System - When underground hang ups are causing problems in your mine, this is the only system that can safely bring down rock without personal and equipment in harms way. It will be on display at our booth and sure to attract a lot of attention.

MacLean MDA Pneumatic Rock Drill - MacLean is a name that is well known in the mining industry. Their family of pneumatic excavator attachment rock drills are built for tough conditions with high production and simple maintenance.

With excitement and anticipation, we welcome you to the much-awaited annual gathering of the mining industry, now proudly known as CIM CONNECT!

You can register for the show at: <https://convention.cim.org/register>

Sunday May 4th 5:00 PM - 8:00 PM

Monday May 5th 10:00 AM - 5:00 PM

Tuesday May 6th 10:00 AM - 5:00 PM

## VISIT TO WSP IN NEW YORK

---

We never turn down an opportunity to fly the flag for our products and talk all things rock breaking. Last month we were invited by WSP USA in New York City to provide a presentation to their geotechnical and tunnelling group. We discussed the role that Nxburst has played in many underground rock excavation projects including the Washington DC Walter Reed Medical Centre Pedestrian Tunnel and the Grand Central - 42nd Street Station Recirculation Project. We were also able to share some preliminary data from another large tunnel project that's just getting under way outside Oslo, Norway. We are happy to share our experiences and technical knowledge to help you get your project off on the right foot.
